

FOR IMMEDIATE RELEASE

Cii stationLINK Modular Utility System wins 2010 GOOD DESIGN™ Award

Designed for today's most demanding workstations with easy reconfiguration

PHOENIX (January 20, 2011) – Communications Integrators Inc. is pleased to announce that stationLINK was awarded the 2010 GOOD DESIGN™ Award by The Chicago Athenaeum/Europe. The GOOD DESIGN AWARD is the oldest and world's most recognized program for design excellence worldwide.

stationLINK is designed for the most demanding workstations, by maintaining the integrity of the workstation and allowing easy access to power, voice and data – all reconfigured with just a snap. For today's modular office space, flexibility and sustainability are essential elements. stationLINK modular power system is a self-contained, expandable unit providing easy access to power, voice and data connectivity by mounting on any work surface. In addition, stationLINK creates a clean, sleek workstation design, while minimizing unsightly cables and plugs.

“We're thrilled to have stationLINK recognized for its design by GOOD DESIGN™,” said Glynn Gross, CEO of Communications Integrators, Inc. “Our idea is to offer designers a modular product that can quickly and efficiently be reconfigured to fit the needs of office space workstations or larger conference areas. In addition to meeting modular needs, stationLINK has a savings of 35-50 percent on installation costs associated with traditional systems.”

GOOD DESIGN Awards follow the same criteria for selection that was set in the 1950's, and bases the evaluation on function and aesthetic of the product along with a contemporary emphasis for environmental concerns and Green Design.

About Communications Integrators, Inc.

Since 1988, Communications Integrators, Inc. (Cii) has pioneered electrical solutions, leading the market in modular power, voice and data systems designed to keep the workplace dynamic and ready for change, as well as connectivity panels created to revolutionize the hospitality industry by and enriching the in-room experience for hotel guests, hospital guests, and those who use multiple technology devices.

In its evolution of connectivity technology products, Cii strives for excellence and integrity in the services performed and the products produced. Product like **stationLINK**, utilizes a unique plug and play modular feature to provide the infrastructure companies need to power any all systems whenever and wherever required, at the lowest cost. Extending the versatility and plug-in-play technology, **slotLINK** allows casinos to reconfigure an entire cluster of gaming machines with minimal disruption to the gaming floor. **guestLINK™** is a first-of-its-kind connectivity panel that enables users to easily connect all of their personal electronic devices to an HD flat-panel TV, enhancing in-room experiences and improving bottom line.
