

FOR IMMEDIATE RELEASE

Benefits of Communications Integrators Inc.'s Modular Power Systems

PHOENIX (September 2, 2010) – [Communications Integrators Inc.](#) (Cii) offers a cost effective, sustainable and flexible power, voice and data solution for commercial building designs. Used in combination with raised access flooring, [modular power systems](#) are an absolute must design criteria for the modern sustainable commercial building.

Sustainability and Cost Savings

Workplaces are constantly evolving because of new technology and organizational changes; installation of raised access flooring and modular power systems offer a cost-effective solution to meet these ever-changing requirements. The Cii modular power system delivers 10 circuits allowing the greatest flexibility in office layouts in the market. Life-cycle costs are reduced more than 80% due to the sustainable nature of the Cii plug-and-play system, eliminating the need to reinvest in a new power system of distribution and the use of licensed electricians and contractors. Reconfiguring the space is done by internal company maintenance personnel with minimal amount of disruption to employees during the typical work day.

Customized Workspace Design

Cii manufactures the modular power system to meet the needs of the company and its workspace and in doing so, creates a more visually appealing environment. In combination with raised access flooring, power cords and power outlets are eliminated. Modular power systems are engineered to meet any circuit design requirement, as well as meeting all NEC building codes.

Safer Work Environments

Not only does raised access flooring provide a better aesthetic workspace design, it creates a safer work environment as well. Modular power systems and drop-in power floor boxes minimize workplace injuries caused by tripping hazards.

Communications Integrators Inc. is a member of the U.S. Green Building Council and has been a pioneer in the design and manufacturing of sustainable modular power, voice and data systems since 1988. For more information about Cii, please visit www.ciinet.com.

About Communications Integrators, Inc.

Since 1988, Communications Integrators, Inc. (Cii) has pioneered electrical solutions, leading the market in modular power, voice and data systems designed to keep the workplace dynamic and ready for change, as well as connectivity panels created to revolutionize the hospitality industry by and enriching the in-room experience for hotel guests, hospital guests, and those who use multiple technology devices.

In its evolution of connectivity technology products, Cii strives for excellence and integrity in the services performed and the products produced. Product like **stationLINK**, utilizes a unique plug and play modular feature to provide the infrastructure companies need to power any all systems whenever and wherever required, at the lowest cost. Extending the versatility and plug-in-play technology, **slotLINK** allows casinos to reconfigure an entire cluster of gaming machines with minimal disruption to the gaming floor. **guestLINK™** is a first-of-its-kind connectivity panel that enables users to easily connect all of their personal electronic devices to an HD flat-panel TV, enhancing in-room experiences and improving bottom line.
